Ramp services, luggage handling (passengers and cargo), cleaning, boarding and disembarkment of passengers... Working for an airport facility, your aircraft ground handling services Company needs to run a lot of processes.

If your business wants to provide an agile, accurate and high-quality service, you must rely on an information system managing all your activity seamlessly together in real time.

Quonext Tourism has a deep knowledge and experience working for the air industry companies, understanding 100% their complex needs. Because of this it provides them **Atennea Handling**, an advanced and comprehensive management software for aircraft ground handling services based on a module set integrated in a unique information system.

Features such as information geographical distribution, adaptation to multiple enterprise setups and total integration into the Microsoft platform make **Atennea Handling** the ideal tool to streamline decisions in your ground handling business. The solution covers a wide range of these organisations operating characteristics:

Being a solution built on the well-known ERP solution Microsoft Dynamics NAV, **Atennea Handling** lets you to enjoy all features of a management software which can be found in 130 countries with more than 1,000,000 users and incorporates a powerful platform to expand your business.

## Atenea Handling modules

### Operations

**Atenea Handling** integrates IATA Type-B messaging for the automated load of the Airlines programming.

Programming maintenance can be alternately or manually performed. Both cases will create daily operations from programming. System also allows the manual creation of non-programmed operations.

### Ramp

This module features allows your handling services company to create:

- Its services catalog
- Equipment types needed for each one of the services
- Inventory of available equipment

Creating Ramp basic packages, your Company can customize the basic services according to the airplane, airline and parking position.

### Platform coordinators

These users can access operations stationed in the assigned positions. This assignment can be daily or per periods done. From the operations query, you will control assigned services, assign allocate extra services and control each equipment usage times.

### Load

The advanced business processes included in this module of **Atenea Handling** allow your Company to:

- Manage several warehouses (in the airport premises or outside)
- Control flight load and unload operations
- Control load movements between the warehouses

This **Atenea Handling** features ensure all containers and pallets traceability.

### Passengers transportation

This module provides a global insight of all vehicles movemements, calculating a forecast of the required resources depending on the day operations.

### Maintenance

The equipments maintenance considers the entries in repair workshop entries control, in order to control the operations resources allocation and to avoid user errors.

## Integration

If your handling services Company already has a maintenance software, **Atenea Handling** integrates both systems to receive the workshop entries and releases from workshop information, avoiding processes duplication.

## Staff

This module features help your Company to perform a huge amount of processes with a high accuracy:

- Control available employees
- Manage days off (scheduled or rotary) and absences (work leaves, holidays, etc.)
- Allocate employees to the different work shifts
- Manage all employees qualifications

## Rates

Commercial management allows you to have a base rating system for all your services (commercial and general aviation). Contracts with airlines including special conditions can be also managed through this module.

## Invoicing

The Invoicing module gathers the provided services information, applying the tariff prices to calculate the amount of each one of these services. **Atenea Handling** gets this information and generates invoices for the airlines.

## Atenea Handling benefits

**Atenea Handling** is the ERP management software for your handling services Company. Its main benefits are:

- Manages all handling services using a single solution
- Speeds up the invoicing of the services provided to airlines
- Reduces administration costs automating processes
- Increases your Company incomes, and also customers and passengers satisfaction
- Improves your services quality
- Reduces dramatically costs, according to the material & human resources optimization
- Calculates all required resources according to forecasted operations
- Controls all services in each operation
- Helps you to easily create rates with a lot of alternatives
- Generates invoices with no need of duplicating information
